## Progress Report 2010/08/06

Reporter:黃重翔

Professor:陳嘉平

## Progress preview

- 用Octave(在linux上運行的仿MatLab軟體)執行htk\_on\_matlab的ToolBox
- 測試GMM training的程式能否計算正確結果

- train\_gmm\_htk: 設定爲做一個state的hmm
- train\_hmm\_htk: 用呼叫htk資料夾下的指令 (HCompv, HRest...)產生出training data
- kmeans: 產生hmm要用的資料初始值
- GMM結構:
  - gmm.nmix: no. of mixture components
  - gmm.priors: array of prior log probabilities over each state
  - gmm.means: matrix of means
  - gmm.covars: matrix of covariance

- 初始化GMM (HMM)參數
- 進行GMM初始化(kmeans)
- 進行HMM training (設定爲一個state)
- 初始化HMM參數(GMM training需要額外的參數設定)
- 進行HInit + HRest
- 讀取HMM檔
- output

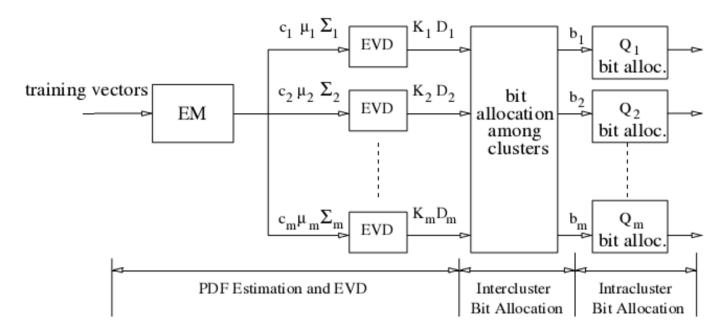

Fig. 2. PDF estimation and bit allocation from training data.
